TRADELACE | FEATURE NOTE

Run your export trade on any ERP

One portal for export trading companies, from the supplier's first quote to export proceeds in the bank.

Export traders juggle suppliers, trucks, containers, lab results, letters of credit and currency risk across email, WhatsApp and spreadsheets, while the ERP only sees the end result. **Tradelace** puts that work in one place, lets AI agents read the paperwork and prepare the next step, and writes clean drafts into the ERP you already run. People approve; your ERP keeps the books.

What it covers

Suppliers and sourcing

Onboarding by link, compliance and expiry tracking, risk score and scorecard. Sealed-bid RFQs with AI bid evaluation, award, contracts and supplier advances.

Receiving and quality

Dispatch notices, gate and weighbridge, test certificates read automatically, spec checks, quality premiums and penalties, lab release or hold, full lot traceability.

Logistics and field app

Transport orders, rates from WhatsApp replies, trip tracking and delay alerts, container booking and BL checks. Offline-first Android app for the gate and yard.

Payables

Invoices matched to orders and receipts, received-not-invoiced, statement reconciliation, and a payment run proposal that sets off advances.

Sales, export and treasury

Buyer credit, export documents checked against the letter of credit, remittances and collections, forex exposure, hedges and daily advice.

30+ AI agents

Read quotations, invoices, certificates, bills of lading, bank advices and replies; check them against the ERP; prepare drafts with their reasons.

Works with your ERP Microsoft Dynamics 365 Business Central • Dynamics 365 Finance & Operations • Oracle NetSuite • SAP S/4HANA • Oracle Fusion Cloud ERP

Each ERP gets a small, upgrade-safe extension in the vendor's own model (AL, X++, SuiteApp, clean-core ABAP, flexfields). Business Central is available today; Finance & Operations and NetSuite connectors are built and in validation; S/4HANA and Fusion are on the roadmap.

How it works

1 Capture
Suppliers, buyers, field staff and messages bring documents and events into the portal.

2 Read and check
AI agents read them and check against orders, contracts, specs and ledgers.

3 Approve
A person reviews the prepared draft and its reasons, then approves.

4 Draft in ERP
The connector writes a draft to your ERP once, never twice. Your team posts.

Why export teams choose Tradelace

- **Drafts only.** Nothing posts to your ERP without a person's approval, and every approval is recorded.
- **No rip and replace.** Keep your ERP, your reports and your BI; Tradelace adds the trade workflow around them.
- **Built for real-world ERPs.** Every connector checks the ERP's answers, retries safely and pauses calls when an ERP is struggling.
- **Country packs.** Tax, customs and export-incentive rules plug in per country, starting with India (GST, e-way bills, shipping bills, realisation).
- **Your sign-in, your model.** Staff use your identity provider; AI runs on the model provider you choose.

See it on your own ERP data. Ask us for a demo and a fit check against your ERP version.
